

# REZNOR®

## REZNOR-HVAC Solutions Industrial\*Commercial\*Residential

**Did You Know??**  
Engineered Thermal Systems was recently  
appointed as an authorized agent for all  
Reznor products!

As ventilation requirements continue to increase in commercial applications Reznor has developed two unique products to help with these higher fresh air requirements.

### MAPS®

#### Modular Air Processing System

The MAPS unit is designed for applications requiring 30%-100% outside air. These units are available with 5-60 Tons DX cooling capacity, indirect fired gas heat, and enhanced dehumidification control with the Reznor Reheat Pump. Energy Recovery Wheels are also offered to minimize energy costs. The MAPS unit is the perfect fit for your DOAS (Dedicated Outside Air System) applications.

### Z62e Series IAQ Ventilator

The first fully integrated, commercial ventilation unit! The Reznor Z62e combines the benefits of a heatpump and an energy recovery wheel in one unit. The Reznor Z62e can operate to cooling EER as high as 17.14. COPs as high as 6.23 may be achieved in the heating mode. This hybrid product maximizes the entire system to provide hassle free year round performance.
